[Price Two Shillings.]

A

SYNONYMIC LIST

OF

BRITISH LEPIDOPTERA,

INCLUDING

THE NAMES AND SYNONYMES OF ALL THESE INSECTS,
EXCEPTING THE FAMILY TINEIDÆ.

(PRINTED ON ONE SIDE ONLY, SO AS TO BE USED FOR LABELS).

BY

HENRY DOUBLEDAY.

LONDON:

JOHN VAN VOORST, PATERNOSTER ROW.

1850.

NOTICE TO ENTOMOLOGISTS.

This day is published, handsomely bound in cloth, 8vo., and beautifully illustrated with numerous woodcuts, price 8s. 6d.,

THE
LETTERS OF RUSTICUS
ON
NATURAL HISTORY.

This work more especially relates to those insects (generally known under the name of blight) which are so injurious to our most valuable crops, as TURNIPS, APPLES, HOPS, &c., &c.

PORTION OF CONTENTS.

Blights, or Insects injurious to Vegetables.—Gooseberry-Grub; the Fly described; Laying the Eggs; the young Grub; Voracity of the Grubs; the Grub described; Change of Skin; Burrows in the Earth; Popular Remedies.—Aphis or Plant-Louse; Injury it causes; Economy of.—Hop-Fly; Influence on Crop of Hops; Influence on the Duty; First Appearance of; Insect-enemies of; Remedies.—American Blight.—Apple Weevil; Description of; Economy of; Remedies.—Apple-Moth.—Apple-Grub; Economy of.—Little Ermine Moth,—Yellow-Tail.—Turnip-Fly; Destructive Powers of; Economy of; Remedies.—Turnip-Nigger; Description of Parent Fly; Economy of; Description of the Grub; Remedies.—Turnip-Weevil.—Turnip-Aphis.—Aphides in Apples, Poplar-leaves and on Roots.—Ants and Aphides.

OPINIONS OF THE PRESS.

“There is a wood-cut, some of them most exquisite, to each chapter, and tail-pieces, after the delightful manner of Bewick, are scattered through the work. It is a most delightful book.”—*Jerrold's Weekly News*, January 6, 1849.

“The most charming contribution to Natural History since the days of good old Gilbert White. These Letters are well worthy of consultation by all gardeners and agriculturists, since the descriptions of these facts are perfectly trustworthy, being in all cases the result of observation.”—*Westminster Review*, January, 1849.

“The collection of facts and observations respecting blights, or insects injurious to vegetation, are especially worthy attention, and we recommend them strongly.”—*Gardeners' and Farmers' Journal*, January 20, 1849.

“A very amusing and instructive volume.”—*Chambers' Edinburgh Journal*, February 3, 1849.

“This work contains by far the best account extant of those insects which are injurious to vegetation, and known by the name of *blight*: the descriptions are no less remarkable for their accuracy than for their popular style and graphic power.”—*Knox's Ornithological Rambles*.

 It is my intention at a future day to prepare and print a list of the Tineidae.—H. D.

NOTICE TO ENTOMOLOGISTS.

A FAMILIAR INTRODUCTION TO THE HISTORY OF INSECTS.

BY EDWARD NEWMAN.

In cloth boards, 8vo., price 12s.

THIS work is illustrated by a profusion of engravings, executed in the first style of the art, from the author's own drawings on the wood. It is divided into four parts. The *first* gives a detailed account of the habits and manners of the most interesting insects, and a description of their wonderful transformations. The *second* treats of capturing, killing and preserving insects, and of constructing cabinets: the most ample details are given, and the author has taken especial pains to explain the most expeditious mode of killing insects, in order to inflict no unnecessary pain on the insects themselves, and also to save the feelings of the humane and kind-hearted. In the *third* part the author describes, in an easy and popular manner, the structure of insects, using language which all may understand, yet never deviating from scientific accuracy. The *fourth* part gives a sketch of the classification of insects; and the work concludes with an Alphabetical Index, each technical word having an explanation as well as reference.

OPINIONS OF THE PRESS.

"The work throughout is clearly written, in many parts with animation and spirit—the result of an active mind distinctly perceiving what it intends to convey."
—*Spectator*.

"A volume which is likely to be very serviceable to the beginner. It is very carefully illustrated by numerous and well-executed wood engravings."
—*Morning Herald*.

"This volume, one of the best familiar introductions to Entomology we have met with, we recommend to those desirous of acquiring accurate elementary information on the history, general physiology, classification, and mode of preserving insects."
—*Professor Jameson's Journal*.

"We have here a complete popular treatise. It is a kind of first book on Entomology, but may answer every purpose to nine-tenths of students."
—*Tait's Edinburgh Magazine*.

"A very acceptable mixture of the *dulce et utile*. Mr. Newman does not take too much knowledge for granted, but, beginning at the beginning, fairly illustrates his subject. We cordially recommend his volume not only to entomological students, but to all lovers of animate Nature."
—*Literary Gazette*.

"The charm of this volume is, that it is written in a frank and explanatory spirit, which will be quite as intelligible and captivating to a child as to a man. There are no mysteries of science buried under ominous italics in its pages."
—*Atlas*.

"The best popular guide to the study of Entomology is Newman's 'Familiar Introduction to the History of Insects.'"
—*Westminster Review*.

[See page 4 of wrapper.]

NOTICE TO ENTOMOLOGISTS.

On the 1st of every Month, price 1s., sewed, is published

THE ZOOLOGIST:

A Magazine for the reception and preservation of all observations connected with British Natural History, more particularly descriptions of new Insects, records of the capture of novelties or rarities, exact localities, date of appearance, mode of capture, descriptions of larvæ, habits and economy, food of larvæ, &c. Each number is in a measure complete in itself, being a full register of the observations of the current month. The principal communications are by the undermentioned Entomologists:—
